

User and Permissions Matrix & Access Control Strategy

This document presents the user permission structure and access control measures used to secure organizational systems and data.

User and Permissions Matrix

User Role / Department	Read	Write	Admin	Description
System Administrator	Yes	Yes	Yes	Full system control
IT Support Team	Yes	Limited	No	System support and maintenance
HR Department	Yes	HR only	No	Employee records management
Finance Department	Yes	Finance only	No	Financial records management
General Staff	Restricted	No	No	Basic system access
External Users	No	No	No	No internal access

Access Control Strategy

- Role-Based Access Control (RBAC) is used to assign permissions according to user roles.
- The Least Privilege Principle ensures users receive only the access required for their duties.
- Centralised Access Management provides consistent permission control.
- Regular access reviews are conducted monthly or quarterly.
- All permission changes require approval from the Access Control Lead or System Administrator.
- Security compliance measures protect sensitive organizational information.
