C = Create

R = Read

U = Update

D = Delete

- NOTES:
- Role-Based Access Control (RBAC) is implemented to ensure users have appropriate access.
 - The Principle of Least Privilege is applied – users only have access to what they need.
 - All access rights are reviewed regularly by the System Administrator.
 - Unauthorized access is prohibited and will be subject to disciplinary action.

Access Control Strategy

- Role-Based Access Control (RBAC) is used to assign permissions according to user roles.
- The Least Privilege Principle ensures users receive only the access required for their duties.
- Centralized Access Management provides consistent permission control.
- Regular access reviews are conducted monthly or quarterly.
- All permission changes require approval from the Access Control Lead or System Administrator.
- Security compliance measures protect sensitive organizational information.
