

Task 5: Troubleshooting Scenarios

Scenario 1 — Desktop Not Powering On

Ticket Information

Issue Title: Desktop Computer Not Powering On

Priority: High

Category: Hardware Support

Reported By: End User

Status: Resolved

Problem Description

The user reported that the desktop computer would not power on after pressing the power button. The system showed no signs of activity and could not be used for work purposes.

Symptoms

- Power button not responding
- No lights displayed on the desktop
- No fan movement or startup sound
- Monitor remained blank
- Keyboard and mouse lights inactive

Possible Causes

- Faulty power cable
- Power supply unit (PSU) failure
- Loose internal power connections
- Damaged wall socket or power outlet
- Faulty motherboard or RAM issue

Troubleshooting Steps

1. Verified that the wall socket was functioning correctly by testing another device.
2. Checked the desktop power cable for visible damage and ensured it was securely connected.
3. Confirmed that the power supply switch at the back of the desktop was turned on.
4. Removed and reconnected the RAM modules to ensure proper seating.

5. Opened the desktop case and checked for loose motherboard power connections.
6. Tested the desktop using a different power cable and power outlet.
7. Performed a power supply test using a spare PSU.

Resolution

The issue was caused by a faulty power supply unit. The PSU was replaced with a functioning unit, and the desktop powered on successfully afterward. The user confirmed that the system was operating normally.

Scenario 2 — No Internet Connectivity

Ticket Information

Issue Title: No Internet Connectivity on Workstation

Priority: Medium

Category: Network Support

Reported By: End User

Status: Resolved

Problem Description

The user reported being unable to access the internet on their workstation. Websites could not load, and online applications were unavailable.

Symptoms

- “No Internet Access” message displayed
- Browser pages failed to load
- Network icon showed limited connectivity
- Unable to ping external websites
- Email and cloud services inaccessible

Possible Causes

- Loose or disconnected network cable
- Router or modem failure
- Incorrect IP configuration
- Disabled network adapter
- ISP service interruption

Troubleshooting Steps

1. Checked whether other devices could access the internet.
2. Verified that the Ethernet cable was properly connected to the workstation and router.
3. Restarted the router and modem.
4. Disabled and re-enabled the network adapter.
5. Ran Windows Network Troubleshooter.
6. Opened Command Prompt and executed:
 - ipconfig /release
 - ipconfig /renew
 - ipconfig /flushdns
7. Tested internet connectivity using the ping google.com command.
8. Updated the network adapter drivers.

Resolution

The issue was caused by an incorrect IP address assignment. Renewing the IP configuration restored internet connectivity successfully. The user confirmed that all online services were functioning properly.

Scenario 3 — Printer Offline

Ticket Information

Issue Title: Network Printer Showing Offline

Priority: Medium

Category: Printer Support

Reported By: Office Staff

Status: Resolved

Problem Description

The office printer appeared offline, preventing users from printing documents from their computers.

Symptoms

- Printer status displayed as “Offline”

- Print jobs stuck in the print queue
- Unable to print test pages
- Printer not detected by workstation
- Error messages displayed during printing attempts

Possible Causes

- Printer disconnected from network
- Printer powered off
- Incorrect printer settings
- Print spooler service malfunction
- Outdated or corrupted printer drivers

Troubleshooting Steps

1. Verified that the printer was powered on and connected to the network.
2. Checked the printer display panel for error messages.
3. Restarted both the printer and workstation.
4. Cleared all stuck print jobs from the print queue.
5. Restarted the Print Spooler service through Services Manager.
6. Confirmed the printer was set as the default printer.
7. Removed and reinstalled the printer drivers.
8. Printed a test page to verify functionality.

Resolution

The issue was caused by a stuck print queue and an unresponsive Print Spooler service. Restarting the spooler service and clearing pending print jobs restored the printer to online status. Printing functionality was successfully restored.
